CONFIDENTIAL · SEED · BUILT IN INDIA

Niji

Own Your Vibe.

A privacy-first social operating system — sealed messaging, time-bound media, and trusted local commerce — designed for the next generation of Indian users.

- End-to-end cryptography on device
- Identity you control — invite, not exposure
- One product surface: chat, status, stalls

01 · WHY NOW

India's digital generation deserves a product built for confidentiality.

After eleven years building and living in the United States, the founder's conviction is simple: US platforms dominate the global social stack, while privacy and security remain secondary to growth. India is ready for an Indian product that treats confidentiality as the default — not a marketing badge.

588M

Short-video consumers — 61% of AIU

IAMAI–Kantar 2025

The market is ready. The default stack is not private.

02 · THE STORY IMAGE

One poster. The whole product.

Top — a wire globe and speech. The world arrives as a chat, not a broadcast.

Centre — a chrome handshake. Trust is a gate, not a follower count.

Left — encryption as texture. The stance is in the art. The UI never says Encrypted.

Right — Vybe: a still, a face, a reel of film. Expression without a forever feed.

Low — commerce as stalls, coin, craft. Hub is culture, not a mall.

Floor — a real mountain. The launch story plants the globe at the top and the mountain on the floor.

Art and interface are the same sheet of paper

03 · NAMASKARAM

The logo is a welcome.

Namaskaram — the Indian culture of greeting.

Namaskaram is how India receives a guest: a bow of respect, the first thing you offer before any conversation. We chose it as the Niji mark because the product is an invitation — into a sealed room, onto a still, onto a paper you share. The chrome form is that greeting made visible.

> The brand is a namaste. The product is the room you are welcomed into.

04 · FIRST IMPRESSION

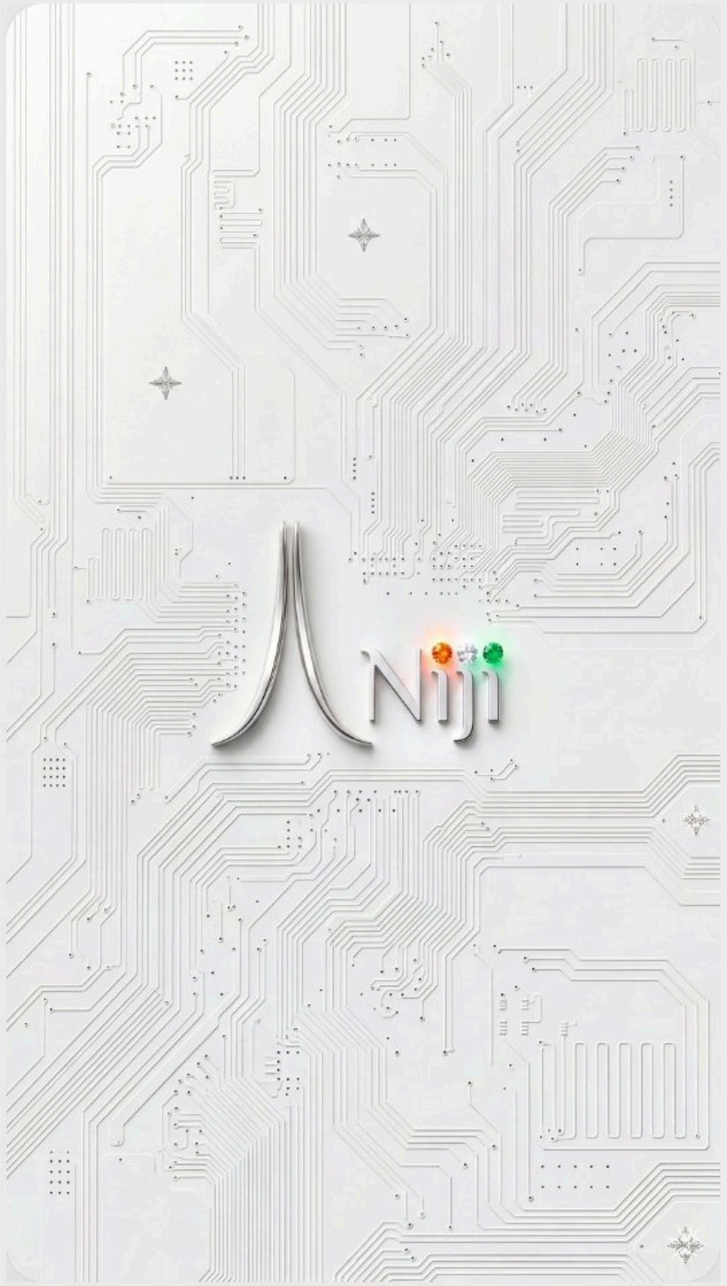

From install, the brand is the product.

The word is machined chrome on a white circuit — encryption as texture, not a padlock ribbon. Three lights sit on the letters: saffron, paper, India green. A pulse, not a flag stamp.

The fingerprint gate is the door. Sign up lights saffron; login lights green — no labels, no clutter.

Story artwork and interface share the same paper, so the brand never feels bolted on.

> Investors are buying a finished visual system, not a theme pack.

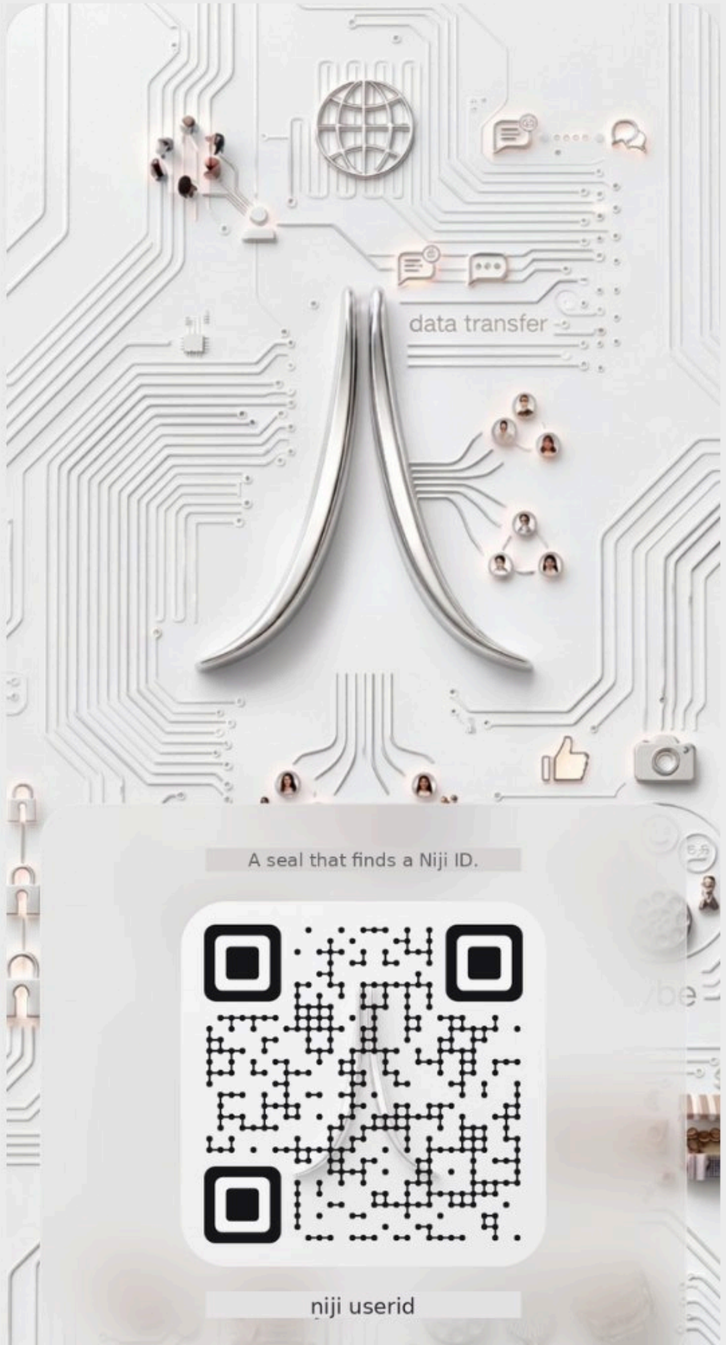

The brand does the speaking. The chrome in the UI stays a hairline.

05 · THE INVITE

The portrait is presence. The seal is the invitation.

The same chrome that greets you on first open becomes the seal on the paper you share. A lasting Niji ID, a Mist alias, or a Hub stall — one circuit, one welcome.

> Distribution starts as a shareable paper that actually opens Niji.

06 · CATEGORY

Same jobs. Different refusals.

WhatsApp — everyone, including family	Niji Trusted — the thread they are not on
Instagram — perform, stay, For You	Vybe — Hold / Pass / Fade. No streak. No public like-count
Signal — homework, US chrome, lock icons	The crypto runs. The UI never says Encrypted
Snap — camera as home, US teen graph	A still on paper. An Indian material. Invite, not a public lens
BeReal — one brittle ping	Ash, Mist, Around — a room you can keep
Forwarded many times	Copy a line. Never forward. Pass, if ever, is one person

Copycats add a skin. Niji removes the machine that made the copy.

07 · PRODUCT SURFACE

Chat · Calls · Vybe · Hub · You

Five rooms on one paper. The desk opens on Chat. Vybe remains the expressive centre.
Hub may be hidden from You.

Chat
SEALED MESSAGES

Trusted threads, Mist aliases, Later, Hub enquiries — copy allowed, never forward.

Calls
VOICE AND VIDEO

The same peer graph as chat. History lives beside the thread, not in a separate product.

Vybe
EXPRESSION

Hold, Pass, or Fade. A still with an expiry contract — not a forever public grid.

Hub
TRUSTED STALLS

Local commerce inside the chat graph. Optional. Hide it from You.

You
IDENTITY

Niji ID, presence, lock, and the paper you share. Not a settings junk drawer.

Five rooms. One paper. Chat carries the seal. Vybe carries the still.

08 · INSIDE CHAT

Trusted · Hub chat · Mist · Later

Trusted
DEFAULT

People you chose. Bold name when unread. No pip beside the name.

Hub chat
COMMERCE

Enquiries, orders, pay — on the same sealed surface as friends.

Mist
TEMPORARY IDENTITY

A name with a timer. Share a code, not a face. When time ends, it fades.

Later
SCHEDULED

Park a line for a future moment. When it leaves, it still sits in the thread.

Search is a swipe down. The + opens a thread.

09 · INSIDE VYBE

Feed · Explore · Notes · Vybe chat · You

Feed
HOME

Your stills, in time. Hold, Pass, or Fade — not a forever public grid.

Explore
AFTER TRUST

Opens only after a trusted graph is real. Not a For You of strangers.

Notes
SIGNAL

A spark, not a bell. Saffron when a note is unread.

Vybe chat
THE STILL

Chat that belongs to the still, not the phone book. No call buttons.

Account
IDENTITY

Your vybe, the mountain paper, the Niji ID.

Header + is a Vybe post. The face on the rail is a status. Two different doors.

10 · RESPECT

On a profile, honour is a silver ring.

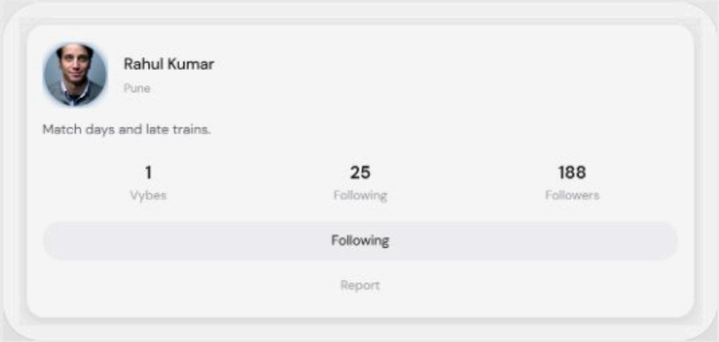

Respect on Vybe sits as a silver ring on the profile — quiet metal, never a blue tick, never a public score.

Silver ring on the Vybe profile — looked at with respect, never a verification tick.

Star on a still — a like that is not a public score.

Ripple is the share itself. No toast. No streak.

Comment: light if empty, heavier if someone wrote. Same mark, more ink.

11 · PROTOCOL

Genuine Signal Protocol. Quiet by design.

libsignal runs on device. The server holds public bundles only. Private keys never leave the phone. Until a second device answers in production, capital funds the remaining wire — not another redesign.

Copy a line. Never forward. Pass, if ever, is one person.

Mist is a temporary name. Seal is a four-digit lock on a thread.

Ash is view-once. Sundown clears by evening. A moon keeps a lunar cycle.

Two status rails: Chat intimacy and Vybe performance never share a tab.

> We implement confidentiality. We do not costume it.

This paper is sealed

Four digits to open it.
Tap the paper to leave.

12 · EXPRESSION AND COMMERCE

Expression without a permanent public stage.

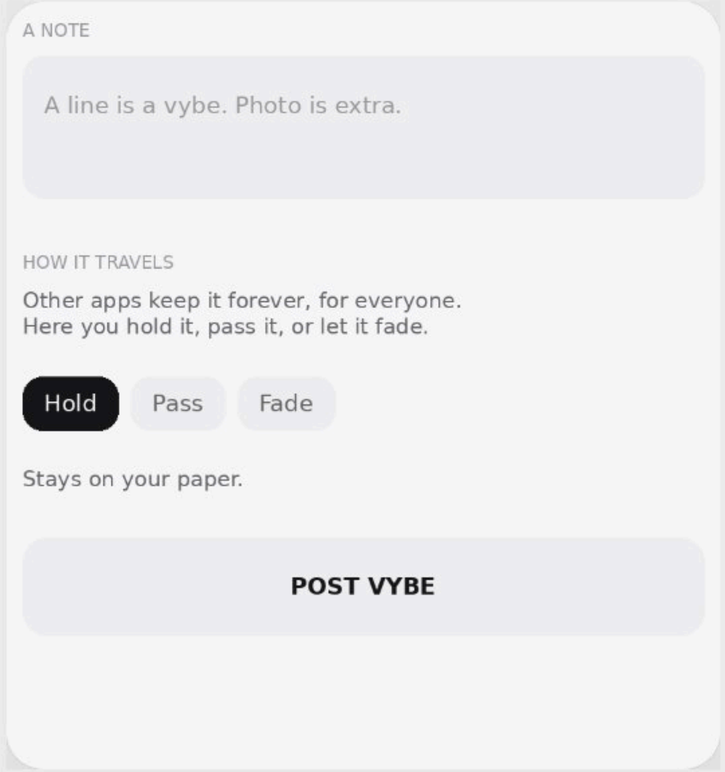

Users keep a room, not a feed. Hold keeps a still private. Pass hands it to people you pick — one path, not a forward chain. Fade lives on the feed for a day, then ashes.

Chat status and Vybe status stay in separate lanes so intimacy and performance never collide.

Hub stalls inherit the chat trust model. Enquiries land in Hub chat. Rank is real feedback — not an advertising bid.

Hub is not the launch sentence. Hide the room. Invite sellers you already chat with.

> Retention through a room people keep — not through an extractive feed.

13 · GO-TO-MARKET

Win one trusted graph. Then the next campus.

Growth is invite-led: Niji ID, mountain QR, and Mist. We expand through cohorts that already know each other — campuses, creator circles, stall hosts — before any public stranger discovery.

01

Beachhead

One city or campus cohort. QR and Mist as the only invite mechanics.

02

Expansion

Adjacent campuses and creators already inside the trust graph.

03

Category

Private social OS — messaging, status, trusted commerce — as one product.

Invite first. Discover never, until the graph is real.

14 · THE ASK

We are raising seed to build India's privacy-first social OS.

This round funds outcomes — not polish. Capital puts sealed messaging in production hands, makes Niji installable nationwide, and grows the first trusted graphs across campuses.

WITH THIS ROUND

Ship sealed chat between real devices. Publish installable Niji so niji:// opens from Camera and share sheets. Land the first invite cohort, then the next campus.

THEN WE SCALE

Safety primitives people trust: block, report, leave. Real voice and video on the same graph. Hub as invite-led stalls — not a stranger mall.

01 Production sealed messaging and calls between real phones

02 App Store / Play distribution with working niji:// invites

03 First campus cohorts live — then city-by-city expansion

04 A confidentiality standard Indian users can actually adopt

Join us in building the social room India has never had.
